PROFILE SUMMARY

Computer Science student passionate about intelligent and real-time web applications using React, JavaScript, and Python. I enjoy building systems that blend user experience with AI - from creating a global typing platform with Firebase to developing an AI-powered document automation pipeline for Notion. Currently exploring ML operations through model drift monitoring, fascinated by making AI systems more reliable in production.

WORK EXPERIENCE

AICTE Eduskills Virtual Internship on AI-ML *Jan – March 2025*

PROJECT EXPERIENCE

Typing Website *(https://typinspeeed.vercel.app/)*

* Developed a fully functional typing speed test website using React and JavaScript, enabling users to measure, analyze, and improve their typing speed in real time through an interactive user interface.
* Implemented dynamic typing challenges featuring real-time feedback, precise accuracy tracking, and words-per-minute (WPM) calculations, creating an interactive and responsive user experience that actively engages users and encourages consistent skill improvement.
* Integrated Firebase to implement secure user authentication and a real-time global leaderboard, allowing users to create personalized accounts, monitor their progress over time, and compete with others worldwide in a dynamic and engaging environment.

LLM-Driven Summarization and Notion Sync Tool *(https://github.com/lucifer-prashant/textToNotion)*

* Built a Python desktop application that monitors clipboard content and automatically generates concise summaries using LLMs, syncing results directly into a connected Notion workspace.
* Integrated third-party Python libraries (pyperclip, requests, pystray) to streamline clipboard monitoring, API communication, and background execution through a lightweight system tray interface.
* Developed robust API integrations with OpenRouter (LLM) and Notion API, enabling end-to-end text summarization workflows with real-time synchronization and minimal user effort.

ML-Monitor: Real-Time Model Drift Detection Dashboard *(https://github.com/lucifer-prashant/ml-monitor)*

* Built a full-stack monitoring application using Python (FastAPI, Pandas) and React that tracks ML model performance, processing data at regular intervals to detect accuracy drops and shifts in data patterns against baseline expectations.
* Implemented a background worker for statistical drift detection by comparing live data with training baselines, generating alerts when values deviate more than 15% than the training data.
* Designed a REST API and interactive React dashboard with periodic chart updates, providing visual indicators and automated alerts when model performance degraded below acceptable limits.

LANGUAGES AND SKILLS

Languages: Python, Java, JavaScript

Skills: HTML, CSS, JavaScript, TypeScript, React, React Native, NextJS, NodeJS, FastAPI, Data Analytics

Tools and Platforms: Firebase, Docker, Linux, Git, GitHub

EDUCATION

* Kalinga Institute of Industrial Technology, Bhubaneswar, Odisha Branch: CSE | CGPA:8.42
* Hem Sheela Model School, Durgapur, West Bengal | Board: CBSE | Percentage:88.4%
* St. Xavier's School, Durgapur, West Bengal | Board: ICSE | Percentage:93.8%
